

- 2.(canceled) The sensor of claim 1 further including a monitor.
- 3.(canceled) The sensor of claim 1 further including a computer.
- 4.(canceled) A sensor for measuring position and orientation of an object comprising:
an imaging device;
a first feature of an alignment target;
a second feature of an alignment target;
whereby and the relative position and size of said first feature and said second
feature measures up to three orthogonal positions and up to three orthogonal orientations
of said object with respect to said imaging device when said first features is in focus and
said second feature is out of focus in said imaging device.
- 5.(canceled) The sensor of claim 1 wherein the imaging device is a camera.
- 6.(canceled) The sensor of claim 1 further including a monitor.
- 7.(canceled) The sensor of claim 1 further including a computer.
- 8.(new) A position and orientation sensor, comprising:
an alignment target having a first optical feature a fixed distance from a second optical
feature;
an imaging device that can form an optical image of said alignment target with said first
feature in focus and said second feature out of focus;
whereby the location and size of said first feature compared to the location and size
of said second feature in said optical image are measurements of up to three orthogonal
positions and up to three orthogonal orientations of said alignment target with respect to
said imaging device.

9. (new) The sensor of claim 8 wherein one or more of said features is a cross hair.
10. (new) The sensor of claim 8 wherein said imaging device comprises a lens and a transparent projection screen.
11. (new) The sensor of claim 8 wherein said imaging device is a camera.
12. (new) The sensor of claim 8 further including a monitor connected to said imaging device.
13. (new) The sensor of claim 8 further including a computer connected to said imaging device.
